

ELEMIS BIOTEC

5 Technologies

BIOTEC Technology	DESCRIPTION	Benefits
Ultra Sonic	The Ultrasonic spatula causes 27,000 vibrations per second through a quartz/ceramic head. These rapid vibrations push skin impurities to the skin surface and cause any dead skin cells to become dislodged. The vibrating hand piece is then used to deep cleanse and gently exfoliate the epidermis. Ultrasonic peeling provides a far gentler and less aggressive alternative to traditional microdermabrasion methods of skin exfoliation.	<ul style="list-style-type: none"> • Draws out impurities • Deep cleansing on impactions • Gently exfoliates surface impurities and pigmentation. • Stimulates collagen production to minimise the appearance of fine lines • Accelerate blood and lymphatic circulation to aid the healing process
Micro Current	Micro Current therapy is an electrical treatment with immediate skin toning and firming effect to re educate and strengthen muscles. This is the gym workout for your face. The low intensity current stimulates muscle fibres but does not cause visible contractions, it can smooth, lift and plump to soften lines. It increases ATP cell energy for long lasting results.	<ul style="list-style-type: none"> • Re-educates and strengthens muscle memory. • Promotes and improves the micro-circulation. • Firms and tightens slackened facial muscles. • Significantly improves the facial contours. • Dramatic lifting effect on the facial contours. • Increases cell energy
Galvanic	Galvanic current is a low intensity direct electric current. Therapeutic actives are introduced into the skin to create specific effects on the skins surface and underlying tissue. The chemical effects are two steps, positive charged ions and negative charged ions to aid penetration and give long lasting effects by impacting the entire epidermis.	<ul style="list-style-type: none"> • Negative: Increases blood supply. Increases redness of the skin. Softens skin impactions and pores relax for deep cleaning. Nerve endings are stimulated. • Positive: Decreases blood supply. Reduces skin redness and has a soothing effect. Restricts and refines pores and firms. Oxygenates the tissues.
Light Therapy	<p>Red Light: Encourages cell growth. Strengthens capillary walls, which encourages lymphatic flow.</p> <p>Blue Light: Constrictive action on capillary walls reducing redness and giving a calming anti irritation effect. Powerful antiseptic and kills bacteria great for the treatment of acne.</p>	<ul style="list-style-type: none"> • Red Light: Stimulates collagen production. Increases cellular renewal. Plumps and smooths the appearance of fine lines. • Blue Light: Delivers a powerful anti-bacterial effect to minimize bacteria. Anti-inflammatory and reduces redness.
O2 Infusion	Oxygen therapy uses powerful bursts of compressed air to infuse the skin with a combination of 95% pure oxygen with selected high potency actives. The active ingredients penetrate through the natural space between the epidermal skin cells into the deeper layers of the skin. Concentrated air pressure on skin tissue visibly plumps out lines, increases skin firmness and hydration, when used in conjunction with active skincare ingredients.	<ul style="list-style-type: none"> • Visibly plumps and smooths the appearance of fine lines • Leaves the skin feeling tighter and firmer • Restores elasticity • Stimulates tissue repair and healing • Rebalances the skin • Results in a more radiant, healthy looking skin
